LifeCare's Solution: LifeCare Connect

LifeCare Connect is a turnkey transitional care and readmission management program. LifeCare makes a patient's healthcare network available at the push of a button. Focused on easing the transition from hospital to home, and helping patients remain at home, LifeCare features customizable macro and micro level monitoring protocols. Conceptually, LifeCare takes the nurse call button a patient utilizes in any acute care setting, and brings it home with them at discharge and beyond.

Based on patient acuity, LifeCare can layer on additional telemonitoring services as needed. LifeCare features bundled services and technology packages for particular chronic conditions such as CHF, as well as conditions with high risk for readmission like joint replacement.

LifeCare Centers On 5 Key Areas:

- 1 Provide patients push button access for assistance for all their needs (emergent/non-emergent) 24/7, and create a centralized hub for the entire care network
- 2 Ensure Primary Care Physician (PCP) follow up post discharge from hospital
- 3 Drive medication reconciliation and compliance between patients and pharmacists
- 4 Immediate clinical intervention on exacerbations 30 and 60 days post discharge
- 5 Detailed reporting to connect providers and payers to ensure optimal care plans and preventive care
